1 Difficulties

Here are some difficulties that I met during my programming.

- It is difficult to get the position of the head and the foot.
- It is hard for me to grap the item from a string by using the pipes.
- I don't know how to write a runall.hash.
- The last one seems still have some problems that I cannot solve it.
- I still afraid to use the subroutines.

2 Instructions

I submit the file to D2L.

3 Hours that I used

I think it takes me around 10 hours to finish it.
